1. ABSTRACT

CryptVault is a decentralized protocol built on Ethereum that enables inventors to monetize intellectual property without disclosure. The platform combines AES-256-GCM client-side encryption, AI-powered metadata valuation via Claude, sealed blind auctions using cryptographic commit-reveal mechanisms, and trustless smart contract escrow to create the world's first encrypted idea marketplace. Inventors retain 80% of proceeds, enforced autonomously by code. Perpetual royalties on secondary sales are baked into the protocol permanently. The CVT platform token enables governance, fee discounts, staking rewards, and ecosystem participation.

2. PROBLEM STATEMENT

Intellectual property theft costs the United States economy an estimated \$500 billion annually. Individual inventors receive less than 12% of their ideas' commercial value through existing channels. The root cause is structural: every existing marketplace for intellectual property requires the inventor to reveal the idea before payment is secured.

2.1 The Disclosure Paradox

To sell an idea, you must show it. But the moment you show it, the information asymmetry that gave it value is destroyed. A disclosed idea can be copied, implemented, or stolen before any payment changes hands. This is not a policy problem — it is an information-theoretic problem.

2.2 Existing Solutions Are Insufficient

Patent System: \$10,000-\$50,000 cost, 2-5 year process, requires full public disclosure, no built-in marketplace.

IP Brokers: 40-60% commission, requires disclosure to broker, no standardized pricing, slow settlement.

Online Marketplaces: Full idea exposure required, no escrow, no standardized valuation, high fraud risk.

NDAs: Expensive to enforce, jurisdiction-dependent, routinely violated, creates legal not economic protection.

3. SOLUTION OVERVIEW

CryptVault resolves the disclosure paradox through a five-stage protocol that separates the information contained in an idea from the economic value of that information.

Stage 1: Client-Side Encryption

The inventor's idea is encrypted with AES-256-GCM directly in their browser using the Web Crypto API. A unique 256-bit symmetric key is generated per submission. The encrypted blob is uploaded to IPFS. The CID is stored on-chain. The symmetric key never leaves the inventor's device.

Stage 2: AI Metadata Scoring

Claude AI evaluates the idea's public metadata across 6 dimensions without accessing the encrypted content. Output is a full investor report with marketability score, scalability assessment, competitive moat analysis, revenue projections, and dollar value estimate.

Stage 3: Sealed Blind Auction

A commit-reveal auction runs on Ethereum. Investors submit a cryptographic commitment: $\text{keccak256}(\text{amount} + \text{salt} + \text{wallet} + \text{listingId})$. Bids are hidden until auction closes. Highest valid bid above reserve wins. Winning bid locked in escrow automatically.

Stage 4: Trustless Key Transfer

Inventor delivers decryption key on-chain. Smart contract verifies delivery and releases 80% to inventor and 20% to platform automatically. No human involvement. Zero trust required. All sales final.

Stage 5: NDA + Perpetual Royalties

Upon purchase, buyer's wallet is bound to an on-chain NDA. Buyer may relist the idea. CryptVault takes 20% of resales. Original inventor earns royalty automatically on every future transaction in perpetuity.

4. TECHNICAL ARCHITECTURE

4.1 Encryption Layer

All encryption operations execute via the Web Crypto API — a browser-native cryptographic interface that runs in a sandboxed context.

Algorithm: AES-256-GCM (Advanced Encryption Standard, 256-bit key, Galois/Counter Mode)

Key generation: `window.crypto.subtle.generateKey({ name: "AES-GCM", length: 256 })`

IV: 96-bit random initialization vector per encryption

Key hash: SHA-256 hash of exported key stored on-chain for verification

4.2 Decentralized Storage

Encrypted idea blobs are stored on IPFS via Pinata's pinning service. Content-addressing via CID ensures the data is immutable and verifiable.

4.3 Frontend Architecture

CryptVault is built as a Progressive Web App (PWA) — a single-file HTML/JS application. Includes: service worker, Web Crypto API, MetaMask integration, EmailJS alerts, and Anthropic API for AI scoring and patent analysis.

4.4 Backend

A lightweight backend API deployed on Vercel handles: IPFS upload coordination, AI scoring API proxying, patent search routing (bypassing CORS), and scout referral tracking.

5. SMART CONTRACT SYSTEM

CryptValt deploys 8 Solidity smart contracts on Ethereum mainnet. All contracts compile on Solidity 0.8.20 with optimization enabled.

Contract	Function
<code>CryptValtValuation.sol</code>	Pricing algorithm. Manages TAM/SAM/SOM model, self-calibrates with real sale data.
<code>CryptValtGovernor.sol</code>	Reputation system. Tracks wallet scores, manages flagging, fraud detection logic.
<code>CryptValt.sol</code>	Core protocol. Listings, sealed auctions, escrow, key transfer, 80/20 payment split.
<code>CryptValtMembership.sol</code>	NFT membership tiers. Bronze (1,000 max), Gold (500 max), Platinum (100 max).
<code>CryptValtFounder.sol</code>	Genesis Founder NFTs. 100 total, 4 rarity tiers, governance veto, 2x revenue multiplier.
<code>CryptValtRevenue.sol</code>	Revenue distribution. Routes platform fees to Platinum members and Founders automatically.
<code>CryptValtToken.sol</code>	CVT ERC-20 token. 100M supply, staking, vesting schedule, fee discounts, burn mechanism.
<code>CryptValtDAO.sol</code>	DAO governance. CVT token voting, Founder veto, proposal execution, timelock.

6. AI VALUATION ENGINE

The CryptVault AI scoring engine uses Claude (Anthropic) to evaluate idea submissions and generate investor-grade valuation reports. The engine operates exclusively on public metadata — it never receives or processes the encrypted idea content.

6.1 Scoring Dimensions

Dimension	Assessment Focus
Marketability	How easy is it to sell? What channels exist? Go-to-market story.
Scalability	Can this grow from 100 to 1M users? What are the unit economics?
Consumer Potential	Why would consumers want this? What pain does it eliminate?
Competitive Moat	Patents, network effects, data moats, switching costs, first-mover advantage.
Execution Feasibility	Can this realistically be built? What resources are required?
Revenue Clarity	How does this make money? How many viable revenue models exist?

6.2 PDF Auto-Fill + Patent Search

Inventors may upload a PDF. Claude AI reads and auto-populates all 10 submission fields. The engine extracts patent keywords and queries USPTO via the Vercel backend (bypassing CORS), returning: CLEAR, REVIEW_NEEDED, or CONFLICT_LIKELY.

7. CVT TOKEN ECONOMICS

7.1 Token Specifications

Token Name	CryptValt Token
Ticker	CVT
Standard	ERC-20 (Ethereum)
Total Supply	100,000,000 CVT
Decimals	18
Initial Price Target	\$0.05 USD
Initial Market Cap	\$5,000,000 USD
Initial Liquidity	10,000,000 CVT (10%)

7.2 Seed Token Raise

CryptValt raises its initial \$500,000 through a token-based investment structure. Instead of traditional equity — which requires bank accounts, legal entities, and lengthy paperwork — investors receive CVT tokens directly to their wallet. This approach is frictionless, global, and fully aligned with the Web3 ecosystem CryptValt is building.

Parameter	Details
Raise Target	\$500,000 USD
Token Allocation	50,000,000 CVT (50% of supply at seed price)
Seed Price	\$0.01 per CVT
TGE Launch Price	\$0.05 per CVT (Uniswap)
Investor Return	5x at Token Generation Event (TGE)
Minimum Investment	\$1,000 USD equivalent in ETH or USDC
Payment Method	ETH or USDC to: 0x26A01Cb4af917a8FD359738b48Dc60E92b1C6504
Token Delivery	At TGE — delivered to investor wallet automatically

Paperwork Required	None — token purchase agreement only
Bank Account Required	No — crypto-native, fully on-chain

7.3 Token Distribution

Allocation	Percentage	Vesting
Community & Ecosystem	40%	Released over 4 years
Team & Founders	20%	2-year lockup, 2-year vest
Treasury	15%	DAO controlled
Ecosystem Grants	15%	Milestone-based
Initial Liquidity	10%	Unlocked at launch

7.4 Token Utility

- Fee Discounts: CVT stakers receive up to 50% reduction in platform fees based on staking tier.
- Governance Voting: 1 CVT = 1 vote on platform proposals. Founder NFT holders retain veto rights.
- Staking Rewards: CVT staked earns a proportional share of platform fee revenue.
- Scout Boost: CVT holding boosts scout referral commission rates.
- Deflationary Burn: 1% of all platform fees are used to buy and burn CVT permanently.

8. NFT ECOSYSTEM

8.1 Membership NFTs

Tier	Supply	Mint Price	Fee Discount	Benefits
Bronze	1,000	0.05 ETH	5%	Early notifications, member badge
Gold	500	0.15 ETH	10%	Priority queue, Gold auctions, monthly report
Platinum	100	0.50 ETH	15%	10% of ALL platform fees, governance rights

8.2 Founder NFTs

A genesis collection of 100 Founder NFTs distributed across 4 rarity tiers. Benefits: 2x revenue multiplier, governance veto power, direct inventor introductions, lifetime Platinum membership, and 10% royalty on all secondary Founder NFT sales.

Rarity	Supply	Mint Price	Revenue Multiplier
Standard	50	0.5 ETH	1.5x
Rare	30	1.0 ETH	2.0x
Ultra Rare	15	2.0 ETH	3.0x
Legendary	5	5.0 ETH	5.0x

9. SECURITY & FRAUD PREVENTION

CryptVault operates an autonomous security monitor powered by Claude AI that continuously scans platform activity for threats. The auto-remediation engine detects and acts on threats without human intervention, sending real-time email alerts to the platform owner.

Threat	Level	Auto-Action
Shill Bidding	CRITICAL	Detected when a wallet bids on its own listing. Bid auto-frozen immediately.
Wash Trading	HIGH	3+ bids from the same wallet within 60 seconds triggers wallet flag and throttle.
Blocked Wallet Bids	CRITICAL	Any bid from a blocked wallet is frozen automatically on detection.
Anomalous AI Scores	WARN	Scores deviating 35+ points from category average flagged for manual review.
Expired Auctions	INFO	Auctions that expire without resolution are logged for administrative action.
IPFS Unavailability	HIGH	Content unreachable after 3 retries triggers listing flag.

10. BUSINESS MODEL & FEE STRUCTURE

Revenue Stream	Rate	Details
Primary Auction Fee	20% of sale	Applied to every primary idea sale
Secondary Market Fee	20% of resale	Applied when investor relists an idea
Inventor Royalty	Inventor-set (0-10%)	Paid to original inventor on every resale forever
NFT Membership Mint	0.05-0.50 ETH	Bronze, Gold, Platinum one-time mint
Founder NFT Mint	0.5-5.0 ETH	100 genesis tokens across 4 rarity tiers
Seed Token Sale	50M CVT @ \$0.01	\$500K raise · 5x at TGE · No bank account required
CVT Token	Ecosystem value	Deflationary utility token — 1% of fees burned permanently
Enterprise Licensing	\$50k-\$500k/yr	White-label platform solution
Investor Penalty Fee	5% of bid amount	Failed payment obligation after winning bid

10.1 Investor Terms

All sales are final after decryption key delivery. Investors may relist ideas for auction. Platform takes 20% of resales. Original inventor earns royalty automatically in perpetuity. On-chain NDA binds all buyers. Penalty fees of 5% apply to failed bid obligations, enforced automatically by smart contract.

11. MARKET OPPORTUNITY

Market Segment	Size	CryptValt Relevance
Global IP Market (TAM)	\$2.9 Trillion	All intellectual property transactions worldwide
IP Licensing Market (SAM)	\$340 Billion	Licensed IP deals and marketplace transactions
Year 5 Target (SOM)	\$4.2 Billion	1.2% of SAM at scale
Annual IP Theft (US)	\$500 Billion	Problem CryptValt directly addresses
Patent Applications/Year	3.5 Million	Potential inventor supply pipeline

12. ROADMAP

Phase 1 — COMPLETE

Full platform built. 8 smart contracts written. AI scoring engine. Backend API on Vercel. Auto-remediation security. PDF autofill. Patent search via backend. CRM and outreach tools. Admin dashboard. Alert system. Scout referral program.

Phase 2 — IN PROGRESS

\$500K seed raise via CVT token sale (50M CVT at \$0.01). Mainnet contract deployment. NFT Membership launch. Founder NFT collection. Revenue sharing activation. DAO governance. CVT token launch. Uniswap liquidity pool.

Phase 3 — Q2 2025

First 100 idea listings. \$1M platform volume. Scout referral fully live. MEXC and Gate.io CVT listing. Twitter API integration. Series A fundraising.

Phase 4 — Q4 2025

Mobile app (iOS + Android). Patent database full integration. Enterprise licensing. \$10M platform volume. KuCoin/Bybit CVT listing. Licensing marketplace.

Phase 5 — 2026+

Enterprise inventor tools. AI-generated IP portfolios. Tier 1 CEX listing. Global expansion. \$100M platform volume target.

13. TEAM

CryptVault was conceived, designed, and built entirely by a solo independent creator — from an Android phone. No VC backing. No team. No office. Just vision, execution, and relentless building.

Michael Venable — Founder

Independent music artist, developer, and entrepreneur operating under the DhatWay creative umbrella. Built CryptVault as proof that one person with the right vision and tools can build infrastructure that changes an industry. Seed funding will be used to expand the team with 2 engineers and 1 marketing lead.
